On the locality condition for Korean subject honorific suppletion

Jaehong Shim (The University of Chicago) jaehongshim@uchicago.edu https://jaehongshim.github.io

32nd Japanese/Korean Linguistics Conference June 15, 2025 Introduction 1/37

Introduction

Main research question:

• What is the locality condition for suppletive subject honorification in Korean predicates?

Introduction 1/37

Introduction

Main research question:

• What is the locality condition for suppletive subject honorification in Korean predicates?

Answer:

- Adjacency between $\sqrt{\text{ and Agr}_{\text{Subj}}[+\text{hon}]}$ (Agr_S from now on) in a single complex head.
- Key data: failure of honorific suppletion in causative and passive constructions

Introduction 1/37

Introduction

Main research question:

• What is the locality condition for suppletive subject honorification in Korean predicates?

Answer:

- Adjacency between $\sqrt{\text{ and Agr}_{\text{Subj}}[+\text{hon}]}$ (Agr_S from now on) in a single complex head.
- Key data: failure of honorific suppletion in causative and passive constructions

Main puzzle:

• Apparent non-adjacency between conditioning and conditioned nodes in auxiliary verb constructions.

Introduction 2/37

Subject honorification in Korean

- Conveying [Speaker < Subject]
- Two types of subject honorification in the predicate morphology
 - Regular honorification
 - Suppletive honorification

Regular honorification

$$V-(u)si$$

a. ai-ka chayk-ul ilk-ess-ta. child-NOM book-ACC read-PST-DECL'The child read a book.'

Regular honorification

V-(u)si

- a. ai-ka chayk-ul ilk-ess-ta. child-NOM book-ACC read-PST-DECL 'The child read a book.'
- cwusang-kkeyse chayk-ul ilk-usi-ess-ta.
 his.majesty-nom.hon book-ACC read-hons-PST-DECL
 'His majesty read a book.'

Introduction 4/37

Suppletive honorification

Suppletive honorific stem

a. ai-ka sakwa-lul mek-ess-ta.child-NOM apple-ACC eat-PST-DECL'The child ate an apple.'

Introduction 4/37

Suppletive honorification

Suppletive honorific stem

- a. ai-ka sakwa-lul mek-ess-ta.child-NOM apple-ACC eat-PST-DECL'The child ate an apple.'
- b. cwusang-kkeyse sakwa-lul **capswusi**-ess-ta. his.majesty-NOM.HON apple-ACC **eat.HON**_s-PST-DECL 'His majesty ate an apple.'

Introduction 4/37

Suppletive honorification

Suppletive honorific stem

- a. ai-ka sakwa-lul mek-ess-ta.child-NOM apple-ACC eat-PST-DECL'The child ate an apple.'
- b. cwusang-kkeyse sakwa-lul **capswusi**-ess-ta. his.majesty-NOM.HON apple-ACC **eat.HON**_s-PST-DECL 'His majesty ate an apple.'
- b'. *cwusang-kkeyse sakwa-lul mek-usi-ess-ta. his.majesty-NOM.HON apple-ACC eat-HON_s-PST-DECL

Introduction 5/37

The locality condition for suppletive honorification

Adjacency-based approaches

• Suppletive honorification is triggered based on the adjacency between the conditioned and conditioning nodes (Koopman, 2005; Chung, 2009; Kim and Chung, 2015).

Non-adjacency-based approach

• Suppletive honorification can be triggered by a non-adjacent node in the same complex head (Choi and Harley, 2019).

Introduction 6/37

Evidence for adjacency-based approach

Causative/passive constructions

• causative/passive suffixes bleed honorific suppletion.

Introduction 7/37

Auxiliary verb construction

The key data for the non-adjacency-based approach

- The asymmetry in subject honorification marking:
- The suppletive honorification on the main verb (V1) is seemingly triggered by a linearly non-adjacent regular honorific suffix on the auxiliary verb (V2).

```
Honorific suppletion?

capswusi-e po-si-ess-ta.
eat.HONs-E see-HONs-PST-DECL

'tried to eat/had an experience of eating an apple (honorific).'
```

Proposal

The honorific suppletion on the main verb is triggered based on adjacency.

• Agr_S is base-generated above the root and triggers honorific suppletion.

A morphotactic constraint \rightarrow The $\sqrt{-Agr_S}$ non-adjacency

- A morphotactic constraint gives rise to morpheme metathesis (Arregi and Nevins, 2012, 2018, 2022).
- Agr_S is dislocated after triggering root suppletion.

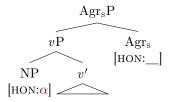

Outline

- Basic ingredients: Regular honorification
- 2 Adjacency-based locality condition for suppletive honorification
- © Counterexample? Auxiliary verb constructions
- Adjacency still holds: a metathesis analysis

Mechanism of subject honorification

Subject honorification is a syntactic operation

Outline

- Basic ingredients: Regular honorification
- 2 Adjacency-based locality condition for suppletive honorification
- Counterexample? Auxiliary verb constructions
- Adjacency still holds: a metathesis analysis

Remember...

Choi and Harley's (2019) argument for the non-adjaency-based locality condition

- A conditioning node can trigger suppletive honorification if it c-commands the conditioned root within the same complex head (cf. Bobaljik's (2012) Root Suppletion Condition).
- The key data are from auxiliary verb constructions.

Auxiliary verb construction

A multiple-verb construction available in Korean (terminology following Yun 1993)

- A non-finite lexical main verb with a suffix -e (V1)
- A fully inflected auxiliary verb (V2)
- Auxiliary verb construction as a single complex head (Lee, 1992; Sells, 1998; Choi and Harley, 2019)

Ai-ka chayk-ul ilk-e-**po**-ass-ta. child-nom book-acc read-E-**see**-pst-decl

'The child tried to read a book/had an experience of reading a book.'

SH in auxiliary verb construction contexts

RegH is marked only to the right of V2.

- a. cwusang-kkeyse chayk-ul ilk-e-po-si-ess-ta.
 his.majesty-NOM.HON book-ACC read-E-see-HONs-PST-DECL
 'His majesty tried to read a book/had an experience of reading a book.'
- b. * ilk-**usi**-e-po-**si**-ess-ta read-**HON**_S-E-see-**HON**_S-PST-DECL
- c. * ilk-usi-e-po-ass-ta read-HONs-E-see-PST-DECL

SupH in auxiliary verb construction contexts

Honorific suppletion is obligatory on V1.

- a. ilk-(*usi)-e-po-si-ess-ta.
 read-HONs-E-see-HONs-PST-DECL
 'tried to read/had an experience of reading (honorific)'
- b. capswusi-e-po-(si)-ess-ta.
 eat-HONs-E-see-HONs-PST-DECL
 'tried to eat/had an experience of eating (honorific)'
- The unacceptability of subject honorification to the immediate right of V1 suggests that the regular honorification to the right of V2 conditions for the honorific suppletion.

Choi & Harley's (2019) analysis

Non-adjacency-based locality condition

• Following Bobaljik's (2012) Root Suppletion Condition, Choi and Harley (2019) argue that honorific suppletion is triggered by Agr_S (Hon in their terminology) c-commanding the root within the same complex head.

```
\sqrt{\text{EAT}} \leftrightarrow \text{capswusi-} / [[\_] \dots \text{HON}]
```

Back to the causative/passive constructions

C&H's analysis makes a wrong prediction.

- Honorific suppletion is predicted in causative/passive constructions.
 - a. mek-hi-si-ess-ta.
 eat-PASS-HONS-PST-DECL
 'was/were eaten (honorific)'
 - b. * capswusi-hi-si-ess-ta. eat.HONs-PASS-HONs-PST-DECL
 - c. capswusi-e-po-si-ess-ta.
 eat.HONs-E-see-HONs-PST-DECL
 'tried to eat/had an experience of eating (honorific)'

Generalized Reduplication

The apparent paradoxical situation can be reconciled with the Generalized Reduplication (GenR) framework (Arregi and Nevins, 2012, 2018, 2022).

- a. Morphotactic constraint
 - * A B
- b. Metathesis in the GenR formalism
 - $\mathbf{A} \to [\![\mathbf{A} > < \mathbf{B}]\!] \to \mathbf{A}\mathbf{B}\mathbf{A} \to \mathbf{B} \to \mathbf{A}$
- c. Metathesis applied across morphemes

$$\mathbf{A} \subset \mathbf{B} \to [\![\mathbf{A} > < \mathbf{C} \,]\!] \to \mathbf{A} \subset \mathbf{A} \subset \mathbf{B}$$

$$\rightarrow$$
 C A B \rightarrow C \llbracket A $><$ B \rrbracket \rightarrow C A B A B

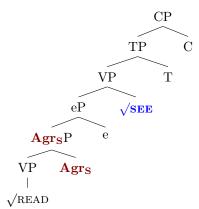

$$\rightarrow C \mathbf{B} \mathbf{A}$$

Agrs's base-generated position

Agr_S is base-generated above V1.

a. ilk-e-po-si-ess-ta.
 read-E-see-HONs-PST-DECL
 'tried to read/had an experience of reading (honorific)'

b.

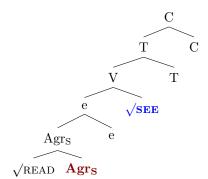

Agrs's base-generated position

Agr_S is base-generated above V1.

a. ilk-e-po-si-ess-ta.
 read-E-see-HONs-PST-DECL
 'tried to read/had an experience of reading (honorific)'

c.

The morphotactic constraint

Agr_S cannot precede another root in the same complex head.

a. * [...
$$\mathbf{Agr_S}$$
 ... $\sqrt{}$...]_X
b. * [$\sqrt{\text{READ}} \mathbf{Agr_S}$ e $\sqrt{\text{SEE}}$...]_C [ilk -usi -e-po ...]_C

 \rightarrow A metathesis is triggered!

The timing of metathesis can differ in different languages.

Derivation: Regular Honorification

The sequence of postsyntactic operations: $VI \prec Metathesis$

- a. Input I: $\sqrt{\text{READ } \mathbf{Agr_S}}$ e $\sqrt{\text{SEE}}$...
- b. Vocabulary Insertion: $\sqrt{\text{READ } \mathbf{Agr_S}} \mathbf{e} \sqrt{\text{SEE}} \dots$ ilk -usi -e -po ...
- c. Input II: ilk $\llbracket -\mathbf{usi} > < -e \rrbracket -\mathbf{po} \dots$
- d. Metathesis: ilk -usi -e **-usi** -e **-po** ...
- e. Input III: ilk -e \llbracket -usi >< -po \rrbracket ...
- f. Metathesis: ilk -e -si -po -si -po ...
- g. Output: ilk -e **-po -si** ...

Derivation: Suppletive Honorification

The sequence of postsyntactic operations: $VI \prec Metathesis$

- a. Input I: $\sqrt{\text{EAT } \mathbf{Agr_S}}$ e $\sqrt{\text{SEE}}$...
- b. Vocabulary Insertion: $\sqrt{\text{EAT}}$ $Agr_S e \sqrt{\text{SEE}} \dots$ $capswusi-\varnothing$ -e -po ...
- c. Input II: $\mathbf{capswusi}$ $[\![-\varnothing > < -e]\!]$ - \mathbf{po} ...
- d. Metathesis: **capswusi-** $-\varnothing$ -e $-\varnothing$ -e -po ...
- e. Input III: capswusi- -e $[-\emptyset > < -po]$...
- f. Metathesis: **capswusi** -e -∅ -**po** -∅ -po ...
- g. Output: capswusi -e -po -Ø

Derivation: Suppletive Honorification

The sequence of postsyntactic operations:

$VI \prec Metathesis$

- a. Input I: $\sqrt{\text{EAT } \mathbf{Agr_S}}$ e $\sqrt{\text{SEE}}$...
- b. Vocabulary Insertion: $\sqrt{\text{EAT}}$ $Agr_S e \sqrt{\text{SEE}} \dots$ $capswusi-\varnothing$ -e -po ...
- c. Input II: $\mathbf{capswusi-} \ \llbracket \ -\varnothing > < -e \ \rrbracket \ -\mathbf{po} \ \dots$
- d. Metathesis: **capswusi-** $-\varnothing$ -e $-\varnothing$ -e -po ...
- e. Input III: **capswusi-** -e $\llbracket -\varnothing > < -\mathbf{po} \rrbracket$...
- f. Metathesis: **capswusi** -e -∅ -po -∅ -po ...
- g. Output: capswusi -e -po -Ø

What about the double exponence, **capswusi**-e-po-**si**?

Optional pre-VI metathesis of Agr_S

Alternative ordering:

VI in V1 \prec Metathesis \prec VI in the remaining nodes

- a. Input I: $\sqrt{\text{EAT } \mathbf{Agr_S}}$ e $\sqrt{\text{SEE}}$...
- b. VI in $\sqrt{\text{EAT}}$ Agrs e $\sqrt{\text{SEE}}$... capswusi-
- c. Input II: capswusi- $[\![\mathbf{Agr_S} > < e]\!] \sqrt{\mathbf{SEE}} \dots$
- d. Metathesis: capswusi- Agr_S e Agr_S e \sqrt{SEE} ...
- e. Input III: capswusi- e $[\![\mathbf{Agr_S} > < \sqrt{\mathbf{SEE}} \,]\!]$...
- f. Metathesis: capswusi- e $\frac{Agr_S}{\sqrt{SEE}} \sqrt{SEE} \frac{Agr_S}{\sqrt{SEE}} \dots$
- g. Vocablary Insertion: $\sqrt{\text{EAT}}$ e $\sqrt{\text{SEE Agr}_S}$... capswusi- -e -po -si ...
- h. Output: **capswusi** -e **-po -si** ...

Alternative ordering and regular honorification

The alternative ordering does not affect the surface form of regular honorification.

- a. Input I: $\sqrt{\text{READ } \mathbf{Agr_S}}$ e $\sqrt{\text{SEE}}$...
- b. VI in $\sqrt{\text{READ}}$: $\sqrt{\text{READ}}$ Agrs e $\sqrt{\text{SEE}}$... ilk-
- c. Input II: ilk- $[\![\mathbf{Agr_S} > < e \,]\!] \sqrt{\mathbf{SEE}} \dots$
- d. Metathesis: ilk- $\frac{\mathbf{Agr_S}}{\mathbf{e}}$ e $\frac{\mathbf{Agr_S}}{\mathbf{e}}$ e $\frac{\sqrt{\mathbf{SEE}}}{\mathbf{e}}$...
- e. Input III: ilk- e $[\![\mathbf{Agr_S} > < \sqrt{\mathbf{SEE}} \,]\!]$...
- f. Metathesis: ilk- e $\frac{\mathbf{Agr_S}}{\sqrt{\mathbf{SEE}}}$ $\frac{\sqrt{\mathbf{SEE}}}{\sqrt{\mathbf{SEE}}}$...
- g. Vocablary Insertion: ilk- e $\sqrt{\text{SEE Agr}_S}$... ilk- -e -po -si ...
- h. Output: ilk -e **-po -si** ...

Conclusion 32/37

Take-away

Adjacency-based approach to suppletive honorification in Korean

- Honorific suppletion is triggered by Agr_S node adjacent to the root in the same complex head.
- Causative/passive constructions

Morphotactic constraint triggering displacement of Agr_S

- An apparent non-adjacency between the suppletive stem and the triggering Agr_S.
- Auxiliary verb constructions

Relative order between metathesis and VI in Agr_S

- \bullet VI in ${\rm Agr_S}$ may happen either before or after metathesis.
- Optional regular honorification on V2 in suppletive honorification contexts

Conclusion 33/37

This is only the beginning.

Fine-tuning the theory with other complex predicate constructions in Korean

• Subject honorification pattern found in predicate topic constructions (terminology following Jo 2004).

Cross-linguistic test for the developed analysis

• The theory should be tested with other languages with honorific suppletion, such as Japanese.

Historical analysis

- Subject honorification has been attested from Middle Korean, with a different pattern.
- Middle Korean exhibits the object honorification, which became lost during the historical change.
